

$\mathcal{N} = (4, 4)$ Gauged Linear Sigma Model for Exotic Five-brane

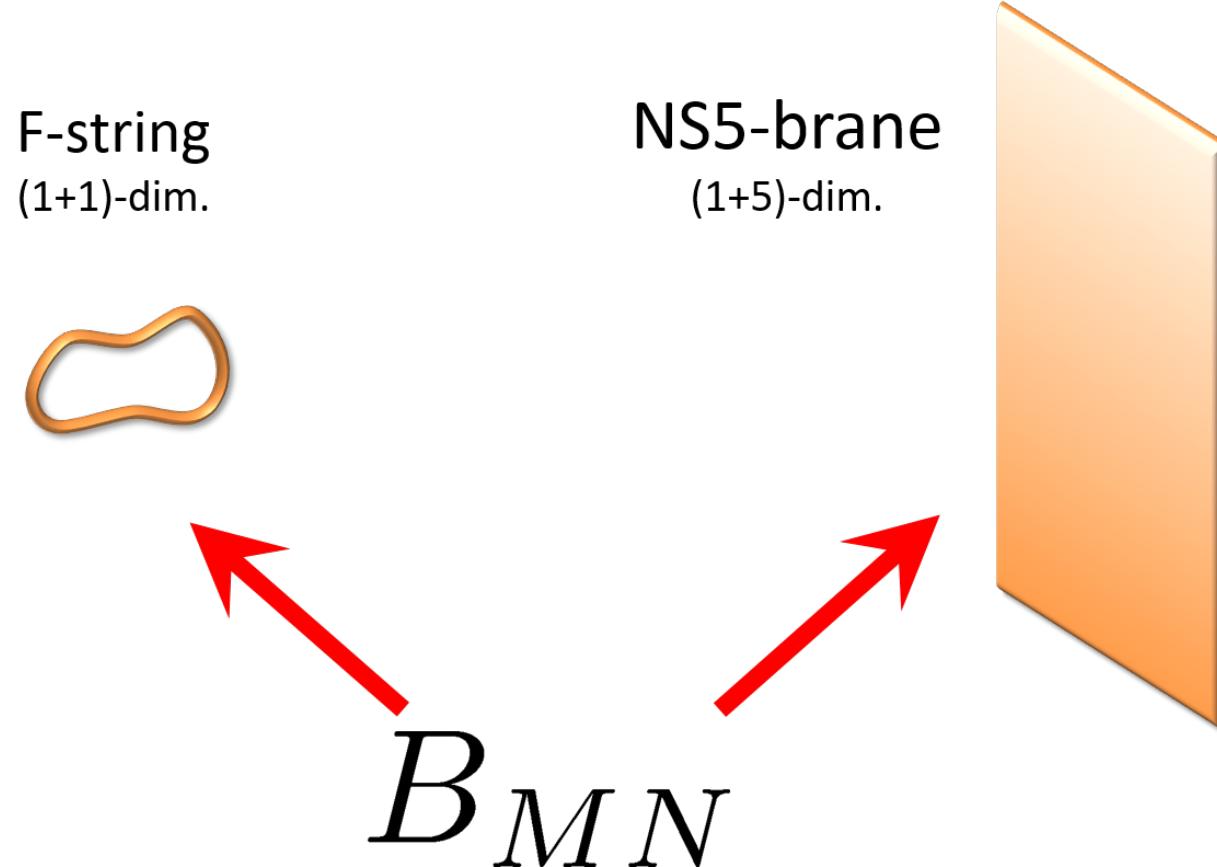

Tetsuji KIMURA

University of Tsukuba

arXiv:1304.4061, arXiv:1305.4439, arXiv:1406.0087, 1503.08635, etc.

in collaboration with Shin Sasaki and Masaya Yata

Objects in 10D string theory

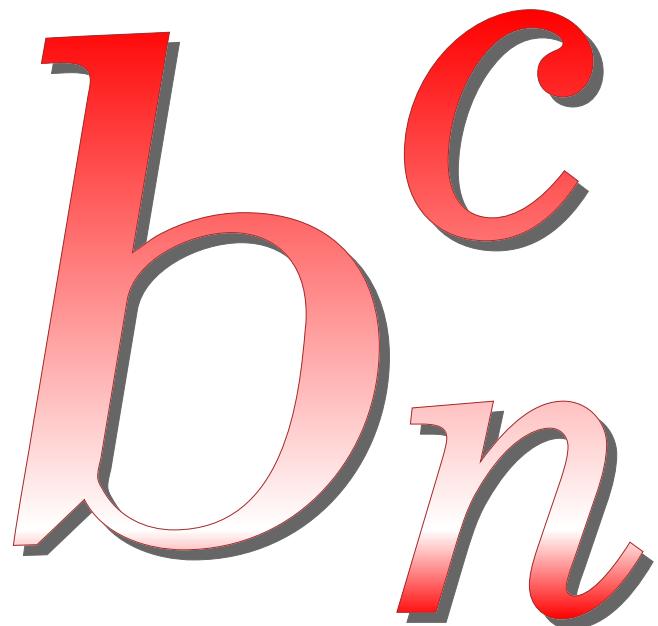

and D-branes coupled to various tensor fields.

- Exotic structure of the background geometry —
- ✓ co-dimension **2** (“defect” branes), or less
 - ✓ monodromy, or non-single-valued

(Exotic) branes are symbolized as

b : spatial dimensions

c : # of isometry directions

n : tension $\sim g_s^{-n}$

Objects in 10D string theory

F-string
(1+1)-dim.

NS5-brane
(1+5)-dim.

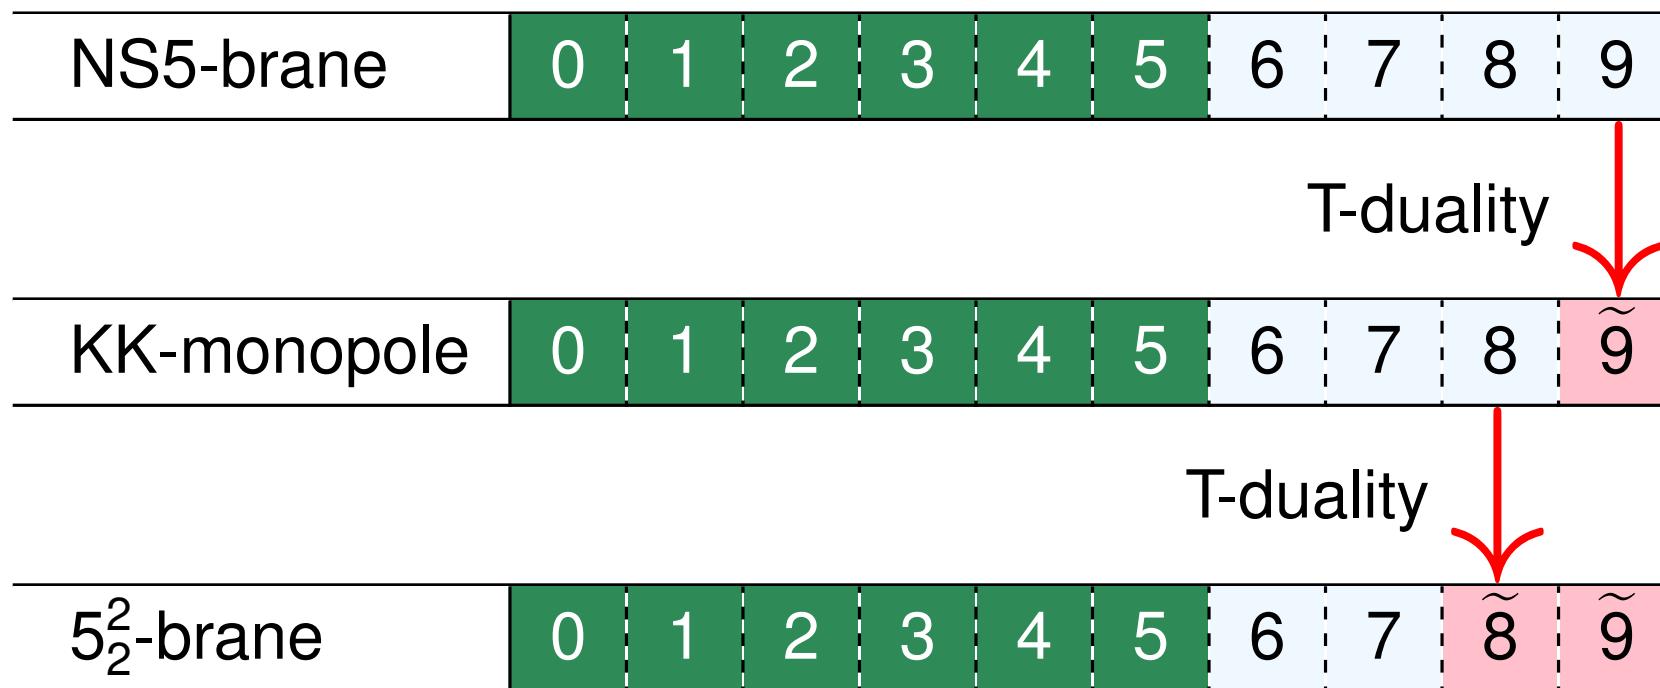

$$B_{MN}$$

F-string = 1-brane, NS5-brane = 5₂-brane
(cf. D-string = 1₁-brane, D5-brane = 5₁-brane)

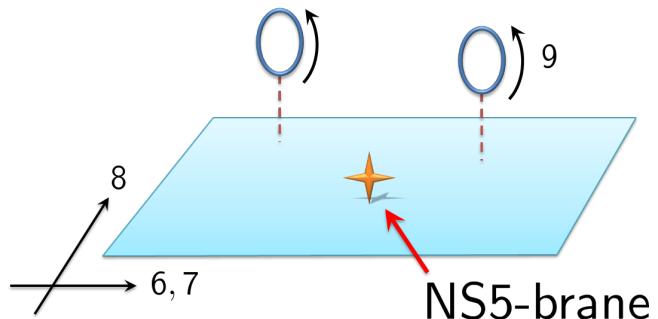

5_2^2 -brane

5_2^2 -brane is constructed from NS5-brane.

5_2^2 -brane is constructed from **NS5-brane**.

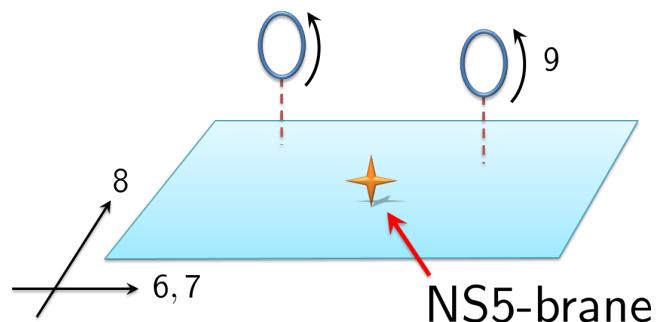

NS5

We focus on four transverse directions.

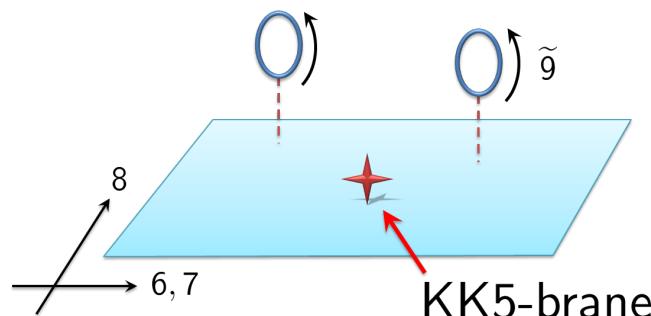

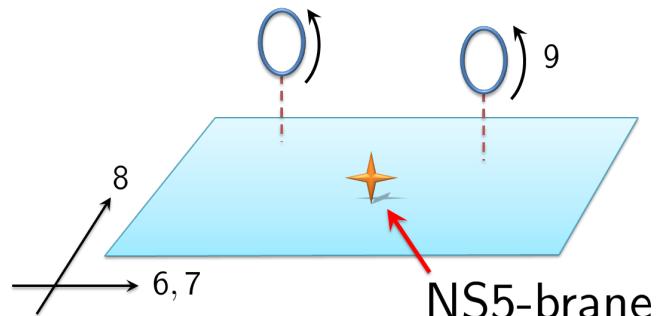

5_2^2 -brane is constructed from NS5-brane.

NS5 $\xrightarrow{T_9}$

5_2^2 -brane is constructed from **NS5-brane**.

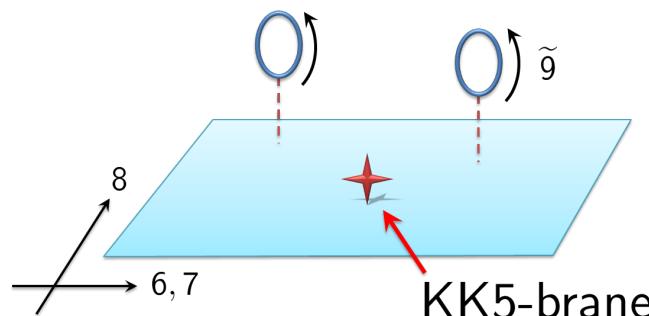

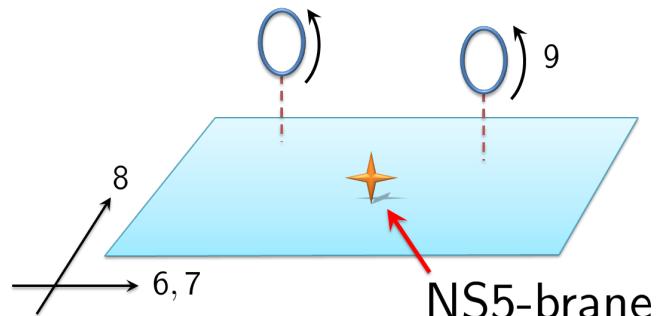

$$\text{NS5} \xrightarrow{T_9} \text{KK5}$$

We often refer to KK-monopole in 10D as KK5-brane.

5_2^2 -brane is constructed from NS5-brane.

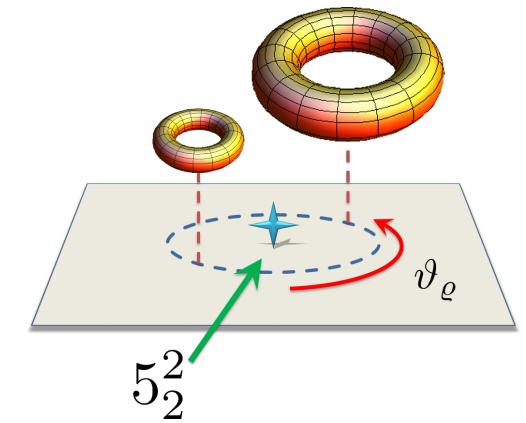

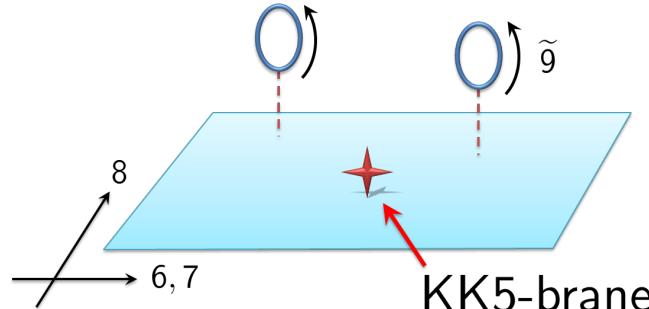

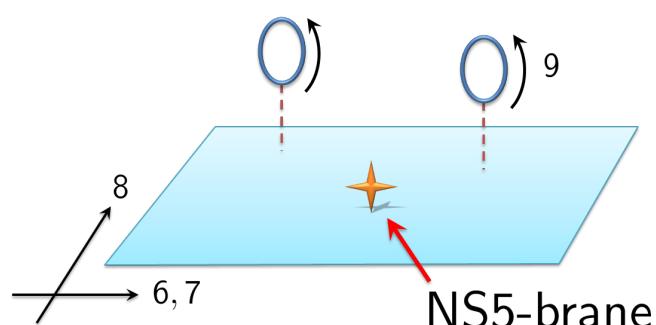

$$\text{NS5} \xrightarrow{T_9} \text{KK5} \xrightarrow{T_8}$$

We often refer to KK-monopole in 10D as KK5-brane.

5_2^2 -brane is constructed from NS5-brane.

$$\text{NS5} \xrightarrow{T_9} \text{KK5} \xrightarrow{T_8} 5_2^2$$

5_2^2 -brane (co-dim. 2) background geometry

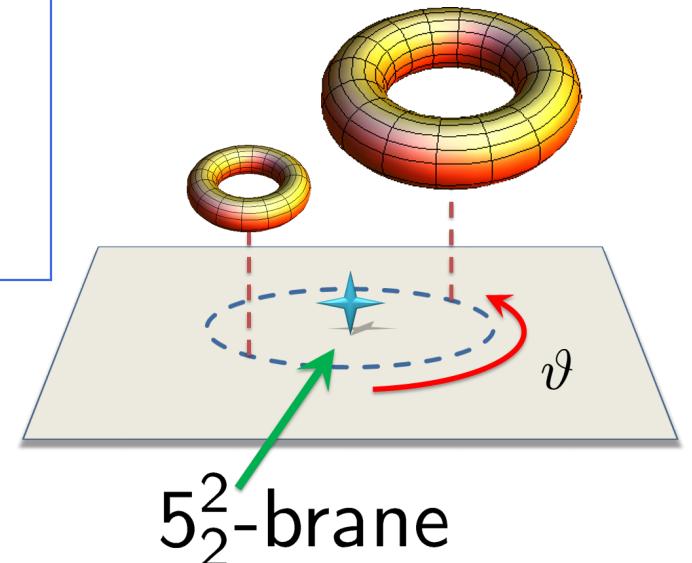

$$ds^2 = dx_{012345}^2 + H[d\varrho^2 + \varrho^2(d\vartheta)^2] + \frac{H}{K}[(d\tilde{x}^8)^2 + (d\tilde{x}^9)^2]$$

$$B_{89} = -\frac{\vartheta}{K}, \quad e^{2\phi} = \frac{H}{K}$$

$$H = 1 + \log \frac{\Lambda}{\varrho}, \quad K = H^2 + \vartheta^2$$

$$\vartheta = 0 : G_{88} = G_{99} = \frac{1}{H}$$

$$\vartheta = 2\pi : G_{88} = G_{99} = \frac{H}{H^2 + (2\pi)^2}$$

We **never** remove the shift 2π by $\left\{ \begin{array}{l} \text{coordinate transformations,} \\ \text{B-field gauge transformation.} \end{array} \right.$

- ✓ never remove the shift 2π by

$$\left\{ \begin{array}{l} \text{coordinate transformations,} \\ \text{B-field gauge transformation.} \end{array} \right.$$
- ✓ ill-defined asymptotic behavior $H = 1 + \log \frac{\Lambda}{\varrho}$ caused by codim.2

Should we abandon it ??

- ✓ never remove the shift 2π by

$$\left\{ \begin{array}{l} \text{coordinate transformations,} \\ \text{B-field gauge transformation.} \end{array} \right.$$
- ✓ ill-defined asymptotic behavior $H = 1 + \log \frac{\Lambda}{\varrho}$ caused by codim.2

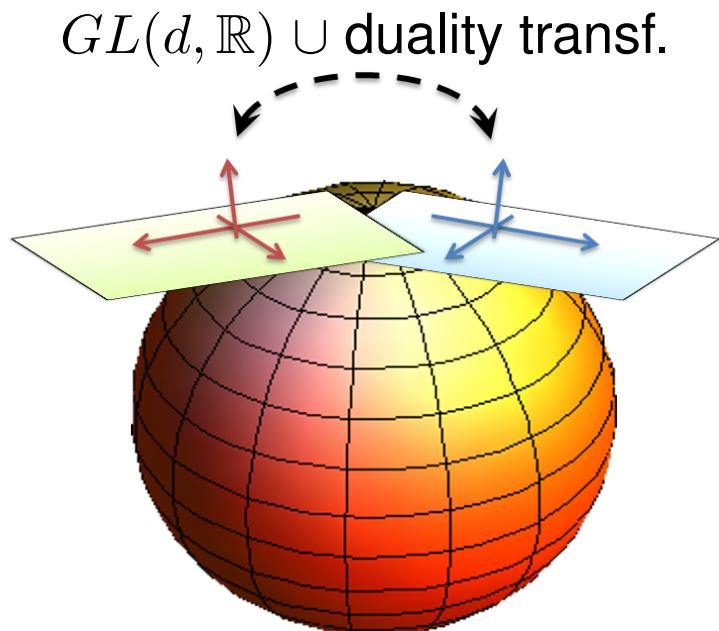

Should we **abandon** it ??

No!

“Supergravity limit” is not globally well-defined.

Non-geometric structure

structure group = diffeom. ($GL(d, \mathbb{R})$) + String duality group

Generalized Geometry (N. Hitchin)
Doubled Geometry (C. Hull)

5_2^2 -brane is a concrete example (T-fold).
(D7-brane is an example of S-fold.)

Exotic brane shows us a new insight of stringy geometry.

5_2^2 -brane background geometry has been analyzed in
Supergravity picture (probed by a point particle).

Now is the time to study **string worldsheet** pictures!

nonlinear sigma model (NLSM)

conformal field theory (CFT)

gauged linear sigma model (GLSM)

GLSM is a powerful tool to explore non-trivial configurations in string theory :
(as the UV completion of string worldsheet theory)

- Calabi-Yau / Landau-Ginzburg
 $\mathcal{N} = (2, 2)$ SUSY
- ALE, ALF spaces (hyper-Kähler) and NS5-branes
 $\mathcal{N} = (4, 4)$ SUSY

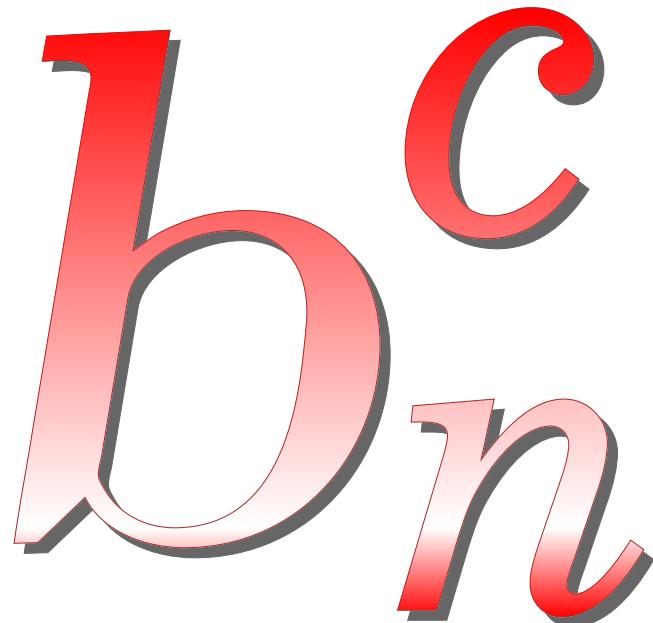

Defect branes in diverse dimensions (codim.2)

	fundamental	Dirichlet	solitonic	S_D -dual of (Dirichlet)	S_D -dual of (fundamental)
D	$n = 0$	$n = 1$	$n = 2$	$n = 3$	$n = 4$
IIB		C_8 [D7]		$E_8 = S_{10}(C_8) [7_3]$	
9		C_7 [D6]		$E_{8,1} = S_9(C_7) [6_3^1]$	
8		C_6 [D5]	D_6 [NS5] $D_{7,1}$ [KKM] $D_{8,2}$ [5_2^2]	$E_{8,2} = S_8(C_7) [5_3^2]$	
7		C_5 [D4]		$E_{8,3} = S_7(C_5) [4_3^3]$	
6		C_4 [D3]		$E_{8,4} = S_6(C_4) [3_3^4]$	
5		C_3 [D2]		$E_{8,5} = S_5(C_3) [2_3^5]$	
4	B_2 [F1]	C_2 [D1]		$E_{8,6} = S_4(C_2) [1_3^6]$	$F_{8,6} = S_4(B_2) [1_4^6]$
3	[P]	C_1 [D0]		$E_{8,7} = S_3(C_1) [0_3^7]$	$F_{8,7,1} [0_4^{(6,1)}]$

and more...

New objects which we investigate with fun

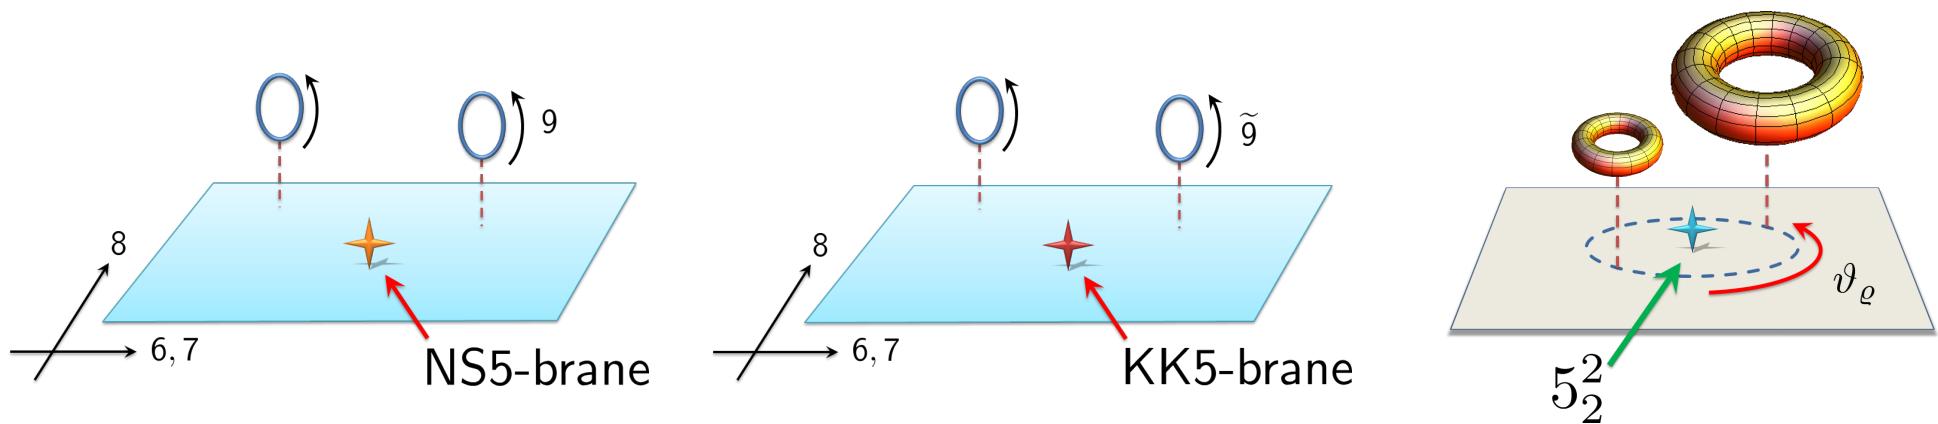

Exotic branes

with SUGRA, NLSM, CFT, **GLSM**, GG, DFT, EFT, etc.

break

5_2^2 -brane is constructed from NS5-brane.

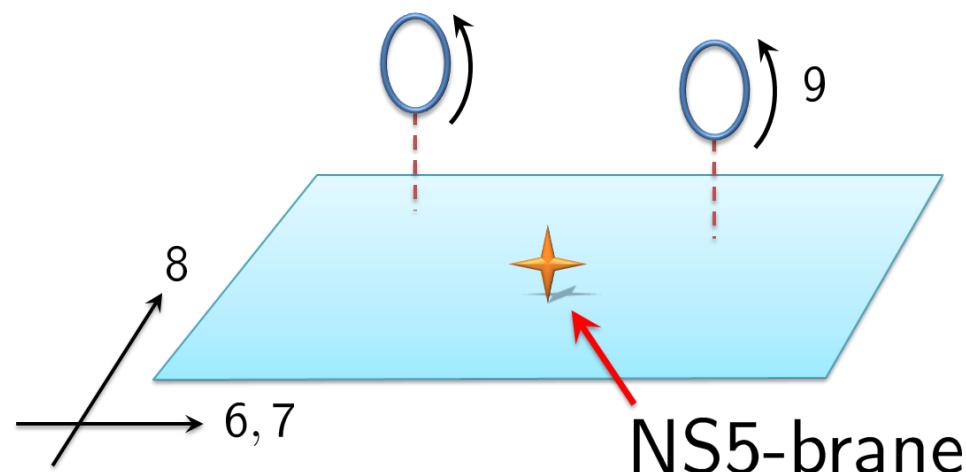

$$\text{NS5} \xrightarrow{T_9} \text{KK5} \xrightarrow{T_8} 5_2^2$$

H-monopole (smeared NS5-brane along 9th-direction)

G_{MN}, B_{MN}, ϕ

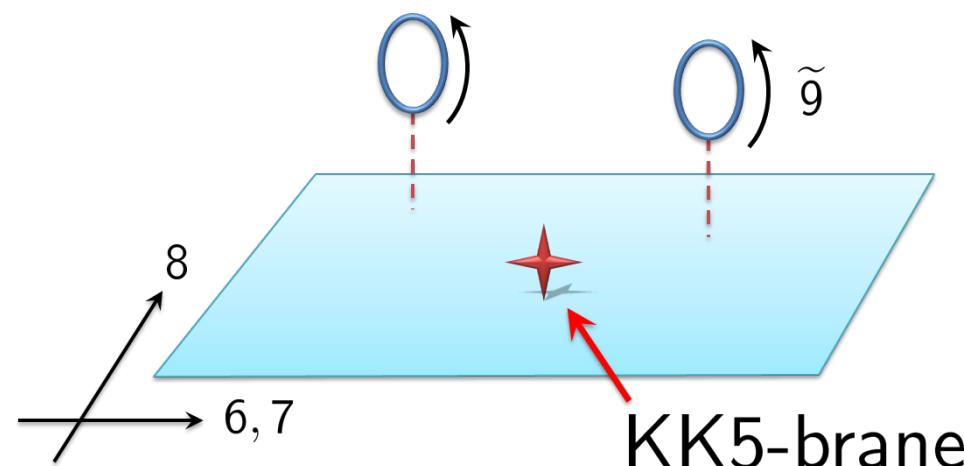

- co-dim. 3 ($\mathbb{R}^3 \times S^1$, $\vec{x} \in \mathbb{R}^3$)
- $ds^2 = dx_{012345}^2 + H[(dx^6)^2 + (dx^7)^2 + (dx^8)^2 + (dx^9)^2]$
- $H = 1 + \frac{1}{|\vec{x}|}$
- $H_{mnp} = 3\partial_{[m}B_{np]} = \epsilon_{mnp}{}^q \partial_q \log H$, $e^{2\phi} = H$

KK-monopole / KK5-brane (Taub-NUT space)

 G_{MN} , ~~B_{MN}~~ , ~~\times~~

- co-dim. 3 ($\mathbb{R}^3 \times \tilde{S}^1$, $\vec{x} \in \mathbb{R}^3$)
- $ds^2 = dx_{012345}^2 + H[(dx^6)^2 + (dx^7)^2 + (dx^8)^2] + \frac{1}{H}(d\tilde{x}^9 - \vec{V} \cdot d\vec{x})^2$
- $H = 1 + \frac{1}{|\vec{x}|}$, $\vec{\nabla}H = \vec{\nabla} \times \vec{V}$
- $H_{mnp} = 0 = \phi$

5_2^2 -brane (co-dim. 2) background geometry

G_{MN}, B_{MN}, ϕ

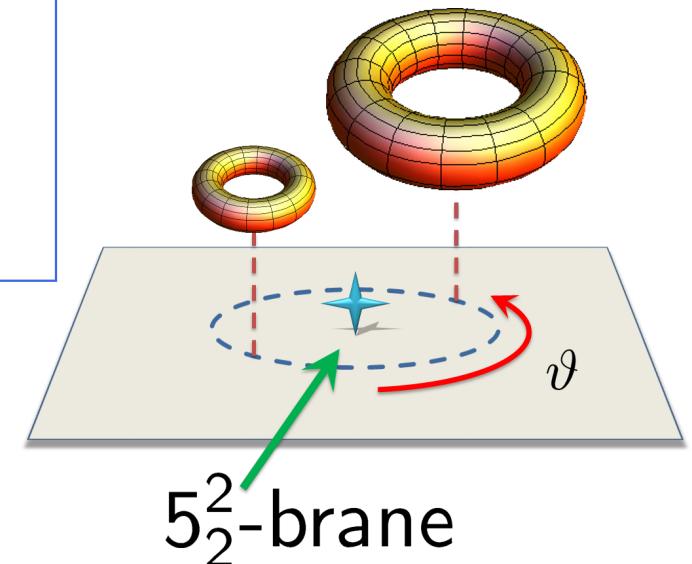

$$ds^2 = dx_{012345}^2 + H[\mathrm{d}\varrho^2 + \varrho^2(\mathrm{d}\vartheta)^2] + \frac{H}{K}[(\mathrm{d}\tilde{x}^8)^2 + (\mathrm{d}\tilde{x}^9)^2]$$

$$B_{89} = -\frac{\vartheta}{K}, \quad e^{2\phi} = \frac{H}{K}$$

$$H = 1 + \log \frac{\Lambda}{\varrho}, \quad K = H^2 + \vartheta^2$$

$$\vartheta = 0 : G_{88} = G_{99} = \frac{1}{H}$$

$$\vartheta = 2\pi : G_{88} = G_{99} = \frac{H}{H^2 + (2\pi)^2}$$

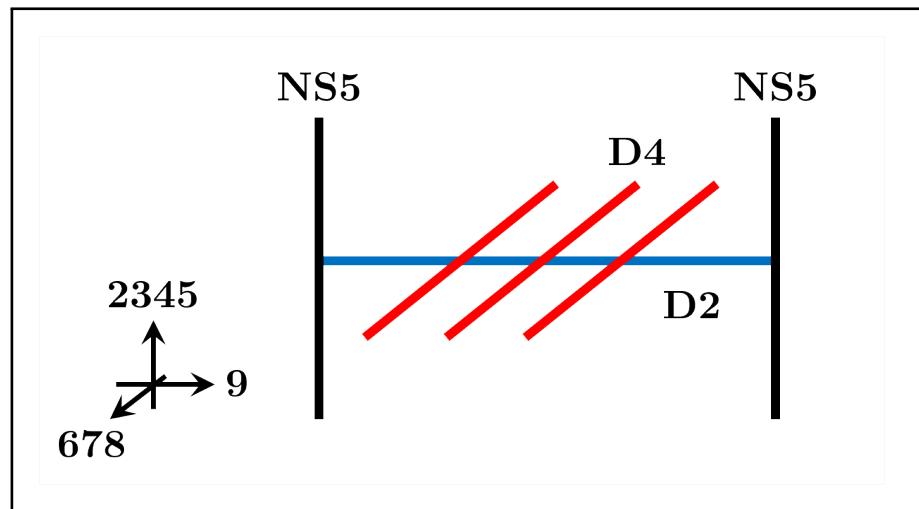

GLSM for five-branes

NS5-branes, KK-monopoles and exotic 5_2^2 -brane

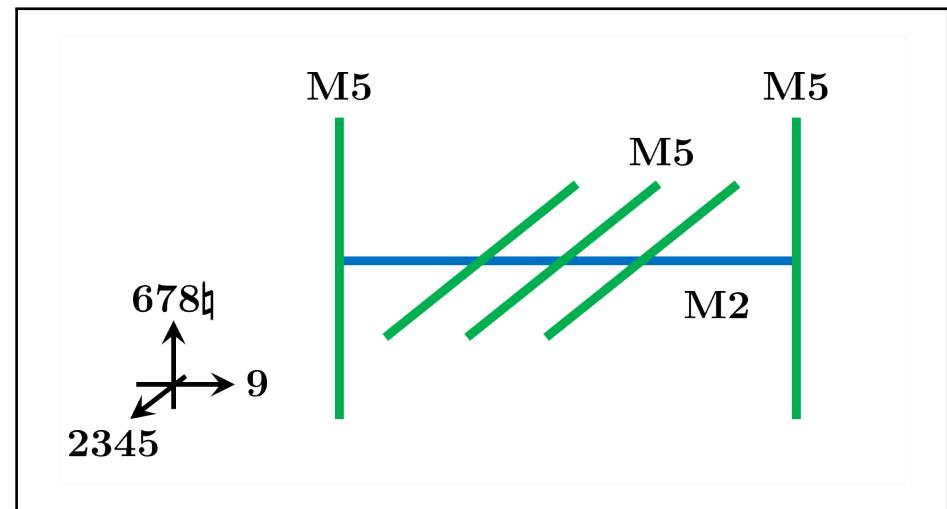

(w/ 2D $\mathcal{N} = (2, 2)$ superfields)

Five-branes background geometries appear
as moduli spaces in appropriate brane configurations

Coulomb branch of

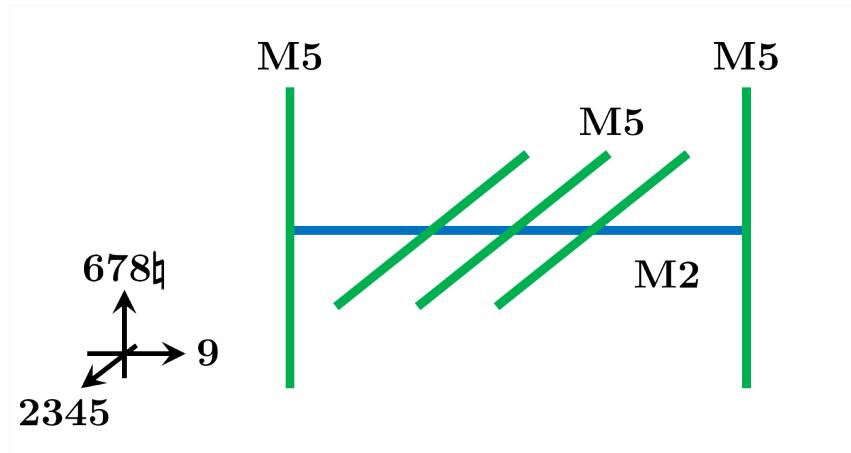

“Higgs” branch of

provide k NS5-branes geometry

We follow the Tong’s construction : Higgs branch

NS5-branes

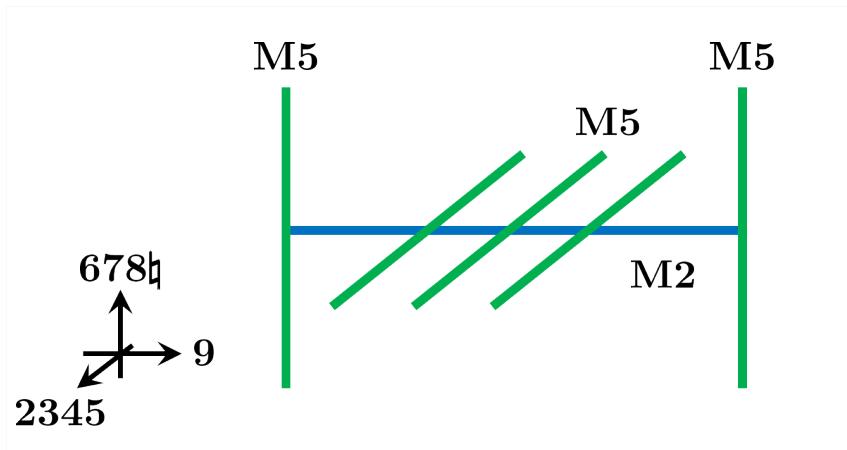

$$\begin{aligned}\mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\ & + \frac{1}{g^2} \int d^4\theta \left\{ |\Psi|^2 - |\Theta|^2 \right\} \\ & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + (s_a - \Psi) \Phi_a \right) + (\text{h.c.}) \right\} \\ & + \sum_a \left\{ \int d^2\tilde{\theta} \left((t_a - \Theta) \Sigma_a \right) + (\text{h.c.}) \right\}\end{aligned}$$

$$X^6 + iX^8 \in \Psi \text{ (chiral)}, \quad X^7 + iX^9 \in \Theta \text{ (twisted chiral)}$$

D. Tong [hep-th/0204186](https://arxiv.org/abs/hep-th/0204186)

NS5-branes

$$\begin{aligned}\mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\ & + \frac{1}{g^2} \int d^4\theta \left\{ |\Psi|^2 - |\Theta|^2 \right\} \\ & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + (\textcolor{red}{s}_a - \Psi) \Phi_a \right) + (\text{h.c.}) \right\} \\ & + \sum_a \left\{ \int d^2\tilde{\theta} \left((\textcolor{red}{t}_a - \Theta) \Sigma_a \right) + (\text{h.c.}) \right\}\end{aligned}$$

$$X^6 + iX^8 \in \Psi \text{ (chiral)}, \quad X^7 + iX^9 \in \Theta \text{ (twisted chiral)}$$

Position is labelled by FI parameters $\vec{r}_a = (s_a, t_a)$

IR limit \rightarrow gauge multiplets are integrated out \rightarrow NLSM on NS5-brane geometry

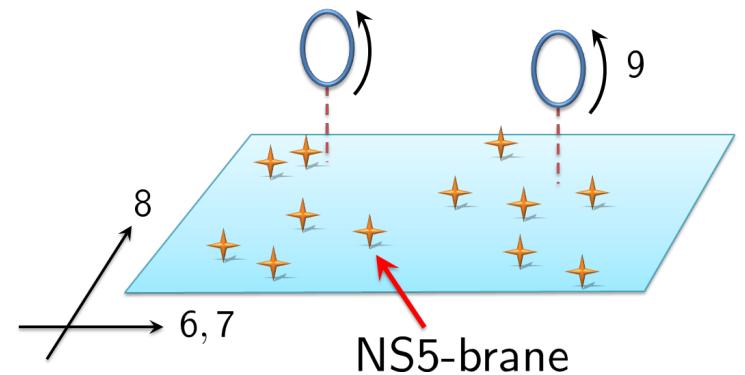

$$\mathcal{L}_{\text{NS5}}^{\text{NLSM}} = -\frac{H}{2} \left[(\partial_m \vec{X})^2 + (\partial_m X^9)^2 \right] + \varepsilon^{mn} \Omega_i \partial_m X^i \partial_n X^9$$

Target space geometry

$$G_{IJ} = H \delta_{IJ}$$

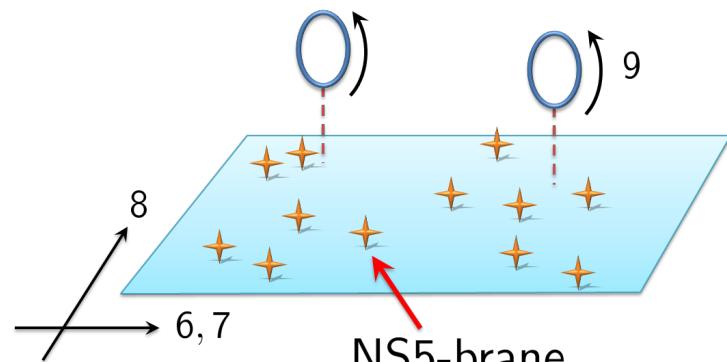

$$B_{i9} = \Omega_i$$

$$H = \frac{1}{g^2} + \sum_a \frac{1}{|\vec{X} - \vec{r}_a|} \quad \nabla_i H = (\nabla \times \Omega)_i$$

Quantum corrections can be traced by **vortex** corrections of 2D gauge fields.

NS5-branes

$$\begin{aligned}\mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\ & + \frac{1}{g^2} \int d^4\theta \left\{ |\Psi|^2 - |\Theta|^2 \right\} \\ & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + (s_a - \Psi) \Phi_a \right) + (\text{h.c.}) \right\} \\ & + \sum_a \left\{ \int d^2\tilde{\theta} \left((t_a - \Theta) \Sigma_a \right) + (\text{h.c.}) \right\}\end{aligned}$$

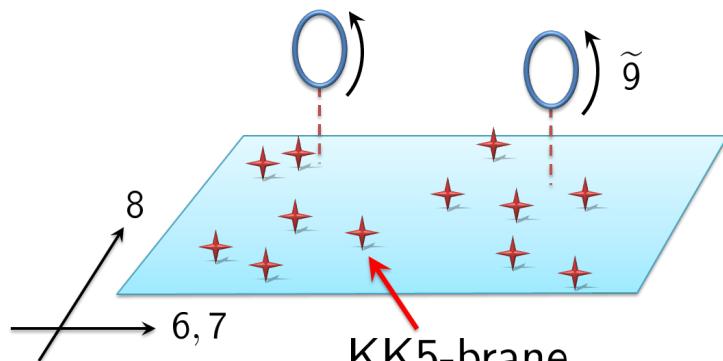

$$X^6 + iX^8 \in \Psi \text{ (chiral)}, \quad X^7 + iX^9 \in \Theta \text{ (twisted chiral)}$$

Dualize neutral twisted chiral $\Theta \rightarrow \Gamma$: **T-duality** along 9th-direction

T-duality transformations

(free) string	sign flip (parity) in right-mover	momentum \leftrightarrow winding
spacetime	Buscher rule	$(G_{IJ}, B_{IJ}, \phi) \leftrightarrow (G'_{IJ}, B'_{IJ}, \phi')$
SUSY sigma model	Roček-Verlinde formula	chiral \leftrightarrow twisted chiral

KK5-branes (multi-centered Taub-NUT)

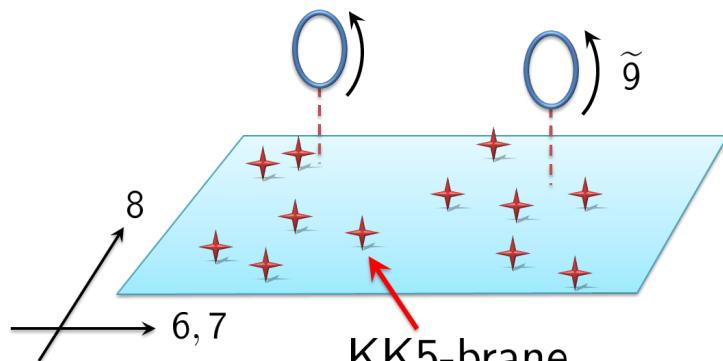

$$\begin{aligned}
 \mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\

 & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + (s_a - \Psi) \Phi_a \right) + (\text{h.c.}) \right\} \\
 & + \sum_a \left\{ \int d^2\tilde{\theta} (t_a \Sigma_a) + (\text{h.c.}) \right\}
 \end{aligned}$$

$$X^6 + iX^8 \in \Psi \text{ (chiral)}, \quad X^7 + i\tilde{X}^9 \in \Gamma \text{ (chiral)}$$

D. Tong [hep-th/0204186](https://arxiv.org/abs/hep-th/0204186)

KK5-branes (multi-centered Taub-NUT)

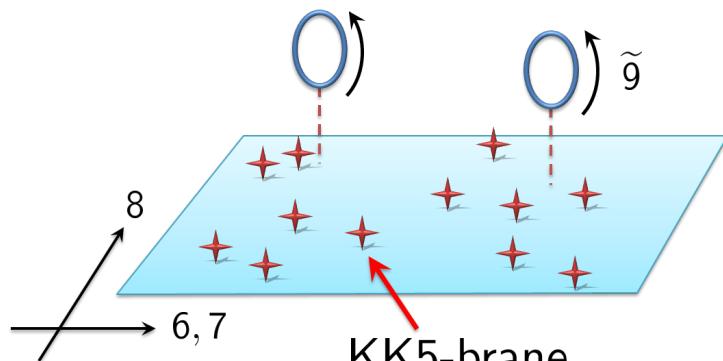

$$\begin{aligned}\mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\ & + \int d^4\theta \left\{ \frac{1}{g^2} |\Psi|^2 + \frac{g^2}{2} (\Gamma + \bar{\Gamma} + \sum_a V_a)^2 \right\} \\ & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + (\textcolor{red}{s}_a - \Psi) \Phi_a \right) + (\text{h.c.}) \right\} \\ & + \sum_a \left\{ \int d^2\tilde{\theta} (\textcolor{red}{t}_a \Sigma_a) + (\text{h.c.}) \right\}\end{aligned}$$

$$X^6 + iX^8 \in \Psi \text{ (chiral)}, \quad X^7 + i\tilde{X}^9 \in \Gamma \text{ (chiral)}$$

Position is labelled by FI parameters $\vec{r}_a = (s_a, t_a)$

IR limit \rightarrow gauge multiplets are integrated out \rightarrow NLSM for KK5-branes

KK5-branes (multi-centered Taub-NUT)

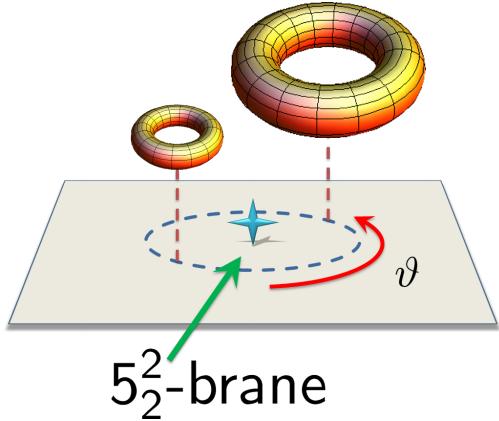

$$\begin{aligned}
 \mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\
 & + \int d^4\theta \left\{ \frac{1}{g^2} |\Psi|^2 + \frac{g^2}{2} (\Gamma + \bar{\Gamma} + \sum_a V_a)^2 \right\} \\
 & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + (s_a - \Psi) \Phi_a \right) + (\text{h.c.}) \right\} \\
 & + \sum_a \left\{ \int d^2\tilde{\theta} (t_a \Sigma_a) + (\text{h.c.}) \right\}
 \end{aligned}$$

$$X^6 + iX^8 \in \Psi \text{ (chiral)}, \quad X^7 + i\tilde{X}^9 \in \Gamma \text{ (chiral)}$$

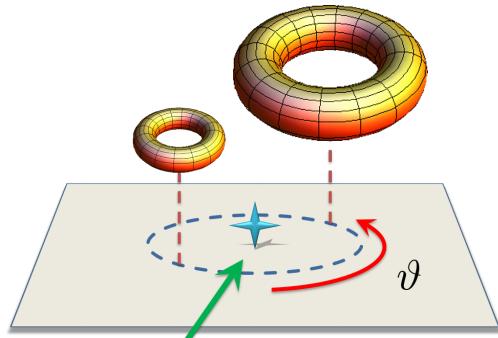

Dualize neutral chiral $\Psi \rightarrow \Xi$: **T-duality** along 8th-direction

Duality transformation with F-term: TK and Yata arXiv:1406.0087

$$\begin{aligned}
 \mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\
 & + \int d^4\theta \left\{ -\frac{g^2}{2} (\Xi + \bar{\Xi} - \sum_a (C_a + \bar{C}_a))^2 + \frac{g^2}{2} (\Gamma + \bar{\Gamma} + \sum_a V_a)^2 \right\} \\
 & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + s_a \Phi_a \right) + (\text{h.c.}) \right\} - \int d^4\theta (\Psi - \bar{\Psi}) \sum_a (C_a - \bar{C}_a) \\
 & + \sum_a \left\{ \int d^2\tilde{\theta} (t_a \Sigma_a) + (\text{h.c.}) \right\}
 \end{aligned}$$

$$X^6 + i\tilde{X}^8 \in \Xi \text{ (twisted chiral)}, \quad X^7 + i\tilde{X}^9 \in \Gamma \text{ (chiral)}$$

$$\begin{aligned}
 \mathcal{L} = & \sum_a \int d^4\theta \left\{ \frac{1}{e_a^2} (|\Phi_a|^2 - |\Sigma_a|^2) + |Q_a|^2 e^{+2V_a} + |\tilde{Q}_a|^2 e^{-2V_a} \right\} \\
 & + \int d^4\theta \left\{ -\frac{g^2}{2} (\Xi + \bar{\Xi} - \sum_a (C_a + \bar{C}_a))^2 + \frac{g^2}{2} (\Gamma + \bar{\Gamma} + \sum_a V_a)^2 \right\} \\
 & + \sum_a \left\{ \int d^2\theta \left(-\tilde{Q}_a \Phi_a Q_a + s_a \Phi_a \right) + (\text{h.c.}) \right\} - \int d^4\theta (\Psi - \bar{\Psi}) \sum_a (C_a - \bar{C}_a) \\
 & + \sum_a \left\{ \int d^2\tilde{\theta} (t_a \Sigma_a) + (\text{h.c.}) \right\}
 \end{aligned}$$

$$X^6 + i\tilde{X}^8 \in \Xi \text{ (twisted chiral)}, \quad X^7 + i\tilde{X}^9 \in \Gamma \text{ (chiral)}$$

$\Psi - \bar{\Psi}$ is no longer dynamical $\rightarrow \begin{cases} \Xi + \bar{\Xi} : \text{ momentum modes} \\ \Psi - \bar{\Psi} : \text{ winding modes!} \end{cases}$

IR limit \rightarrow gauge multiplets are integrated out
Further, integrate out $\Psi - \bar{\Psi}$: Exotic Five-brane!

Steps to NLSM for 5_2^2 -brane

1. search SUSY vacua
2. solve constraints of charged HM (Q_a, \tilde{Q}_a)
3. integrate out VM (V_a, Φ_a) in IR
- ★4. integrate s_a^8 , and solve EOM for X^8 in $\Psi - \bar{\Psi}$

Why is $\Psi - \bar{\Psi}$ integrated out at the final step?

→ X^8 in $\Psi - \bar{\Psi}$ still appears as a winding coordinate in string worldsheet sigma model.

We should **not** integrate it out **before** integrating-out of VM.

Step 1.,2.,3. :

$$\begin{aligned}
 \mathcal{L} = & -\frac{1}{2}H\left[(\partial_m X^6)^2 + (\partial_m X^7)^2 + (\partial_m X^8)^2\right] - \frac{1}{2H}(\partial_m \tilde{X}^9)^2 \\
 & -\frac{(\Omega_8)^2}{2H}(\partial_m \textcolor{magenta}{X}^8)^2 + \frac{\Omega_8}{H}(\partial_m \textcolor{magenta}{X}^8)(\partial^m \tilde{X}^9) \\
 & -\frac{(\Omega_6)^2}{2H}(\partial_m X^6)^2 - \frac{\Omega_6 \Omega_8}{H}(\partial_m X^6)(\partial^m \textcolor{magenta}{X}^8) + \frac{\Omega_6}{H}(\partial_m X^6)(\partial^m \tilde{X}^9) \\
 & + \varepsilon^{mn}(\partial_m \textcolor{magenta}{X}^8)(\partial_n \tilde{X}^8)
 \end{aligned}$$

$$R_a = |\vec{X} - \vec{r}_a|$$

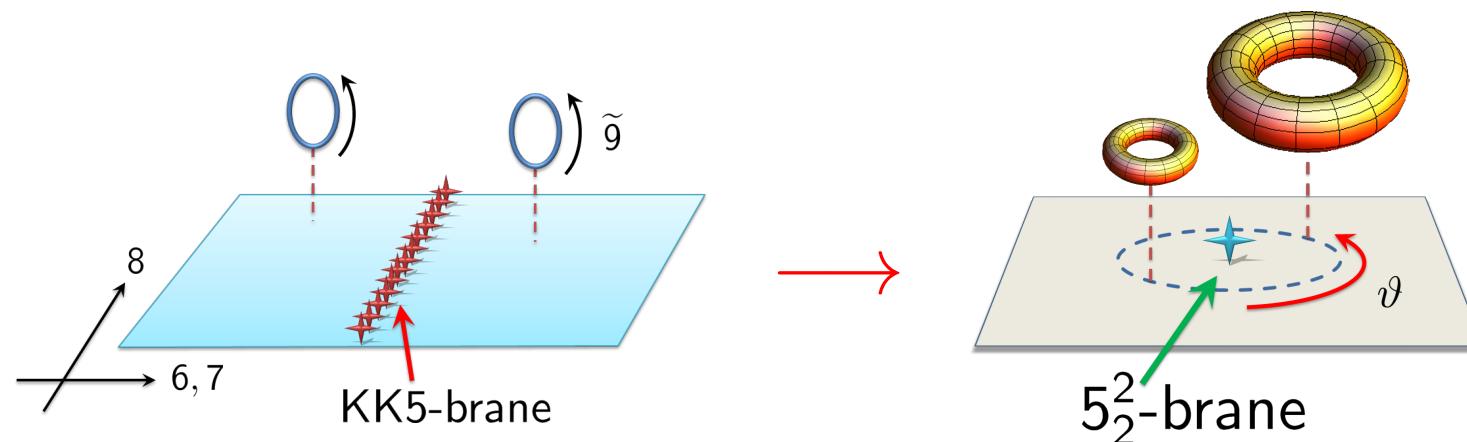

$$H = \frac{1}{g^2} + \sum_a \frac{1}{R_a}, \quad \Omega_6 = \sum_a \frac{X^8 - s_a^8}{R_a(R_a + (X^7 - t_a^7))}, \quad \Omega_8 = - \sum_a \frac{X^6 - s_a^6}{R_a(R_a + (X^7 - t_a^7))}$$

Step 4. : $s_a^8 = (2\pi R_8) a \xrightarrow{\text{infinite sum of } a} \text{emerge isometry}$

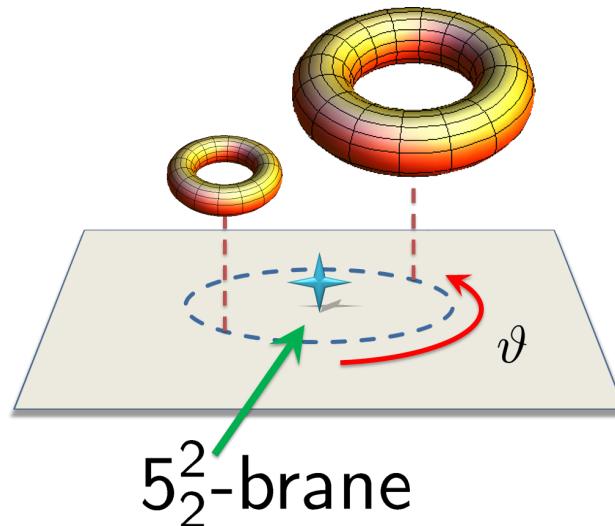

$$\left\{ \begin{array}{lll} H \rightarrow 1/g^2 + \log(\Lambda/\varrho) & : \text{co-dim. 2} & \varrho = \sqrt{(X^6 - s^6)^2 + (X^7 - t^7)^2} \\ \Omega_6 \rightarrow 0 & : \text{isometry along } X^8 \\ \Omega_8 \rightarrow \arctan\left(\frac{X^7 - t^7}{X^6 - s^6}\right) \equiv \vartheta & : \text{"non-single-valued" metric} \end{array} \right.$$

EOM for X^8 : $\partial_m X^8 = \frac{H}{K} \left[\frac{\vartheta}{H} (\partial_m \tilde{X}^9) + \varepsilon_{mn} (\partial^n \tilde{X}^8) \right]$

$$K = H^2 + \vartheta^2$$

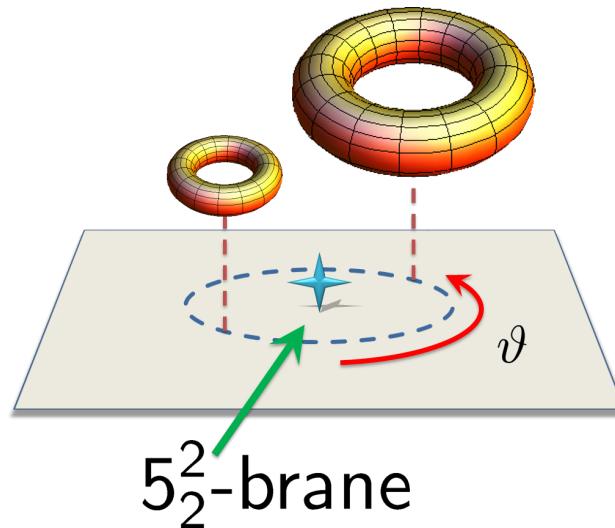

$$\begin{aligned}\mathcal{L}_{\text{exotic}}^{\text{NLSM}} = & -\frac{H}{2} \left[(\partial_m \varrho)^2 + \varrho^2 (\partial_m \vartheta)^2 \right] - \frac{H}{2K} \left[(\partial_m \tilde{X}^8)^2 + (\partial_m \tilde{X}^9)^2 \right] \\ & - \frac{\vartheta}{K} \varepsilon^{mn} (\partial_m \tilde{X}^8) (\partial_n \tilde{X}^9)\end{aligned}$$

We obtained NLSM for Exotic 5_2^2 -brane.

Exotic feature comes from the string winding modes.

$$\begin{aligned}\mathcal{L}_{\text{exotic}}^{\text{NLSM}} = & -\frac{H}{2} \left[(\partial_m \varrho)^2 + \varrho^2 (\partial_m \vartheta)^2 \right] - \frac{H}{2K} \left[(\partial_m \tilde{X}^8)^2 + (\partial_m \tilde{X}^9)^2 \right] \\ & - \frac{\vartheta}{K} \varepsilon^{mn} (\partial_m \tilde{X}^8) (\partial_n \tilde{X}^9)\end{aligned}$$

Spacetime picture involving string winding modes

beyond the Einstein's view of gravity !

Summary

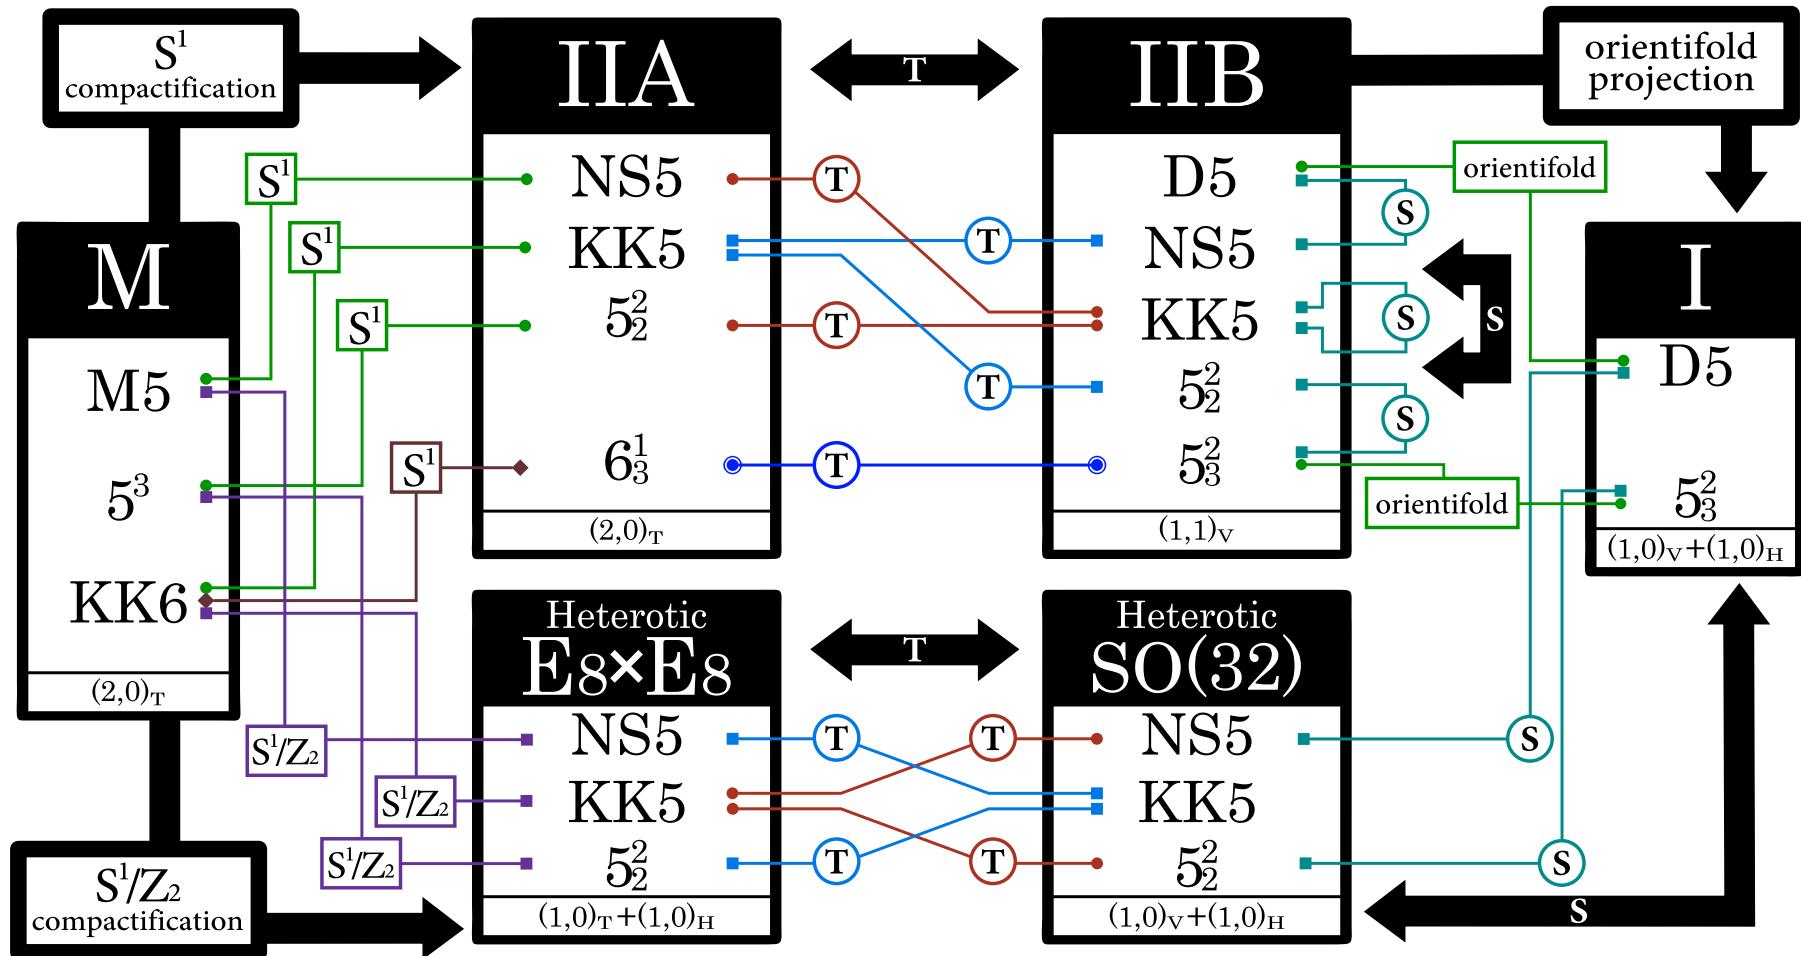

We have established the GLSM for Exotic Five-brane.

- ✓ started from Tong's GLSM for NS5-branes
- ✓ dualized superfields in F-term
- ✓ generated multi-valuedness by auxiliary fields (winding modes)

- ✓ worldsheet instanton corrections ([arXiv:1305.4439](https://arxiv.org/abs/1305.4439))
- ✓ We have also studied worldvolume action ([arXiv:1404.5442](https://arxiv.org/abs/1404.5442))
- ✓ There exist many topics on exotic branes!

See also appendix of this presentation.

A very rough sketch on D7-brane (co-dim. 2 in 10D)

Moving around a D7-brane induces an $SL(2, \mathbb{Z})$ monodromy charge q

$$q : (C_2, B_2) \rightarrow (C_2 + B_2, B_2)$$

Since co-dim. 2, brane charges are not conserved but

$$(0, \text{NS5}) \rightarrow (\text{D5}, \text{NS5})$$

Diagonalize $U(1)_{i,F} \rightarrow$ [D. Tong hep-th/0204186](#)

Duality transformations with **F**-term

in $\mathcal{N} = (2, 2)$ framework

Duality : chiral Ψ \longleftrightarrow twisted chiral Y

Target space geometry is T-dualized under the above transformation.

Duality : chiral Ψ \longleftrightarrow twisted chiral Y

Target space geometry is T-dualized under the above transformation.

- dualize **neutral** chiral in D-term (ex. torus)

$$\int d^4\theta |\Psi|^2 \leftrightarrow \int d^4\theta \left[\frac{1}{2}R^2 - R(Y + \bar{Y}) \right] \leftrightarrow - \int d^4\theta |Y|^2$$

- dualize **charged** chiral in D-term (ex. projective space)

$$\int d^4\theta |\Psi|^2 e^{2V} \leftrightarrow \int d^4\theta \left[e^{2V+R} - R(Y + \bar{Y}) \right] \leftrightarrow - \int d^4\theta (Y + \bar{Y}) \left[\log(Y + \bar{Y}) - 2V \right]$$

These are well established.

“Global symmetry” $\Psi + \alpha$ (or $e^{i\alpha} \Psi$) is preserved in D-term,
but broken in F-term.

— Make sense? —

- ▶ dualize **neutral** or **charged chiral** in D-term and **F-term**

They can be interpreted as T-duality transformations
under conversion from **F-term** to **D-term** with trick(es).

► Dualize **neutral** chiral in D-term and **F**-term

$$\mathcal{L}_1 = \int d^4\theta |\Psi|^2 + \left\{ \int d^2\theta \Psi \mathcal{W}(\Phi) + (\text{h.c.}) \right\}$$

1. Convert **F**-term to D-term via $\mathcal{W} = \overline{D}_+ \overline{D}_- C$:

$$\int d^2\theta \Psi \mathcal{W} + (\text{h.c.}) = \int d^4\theta \left[(\Psi + \overline{\Psi})(C + \overline{C}) + (\Psi - \overline{\Psi})(C - \overline{C}) \right]$$

2. Replace $\Psi \pm \overline{\Psi}$ to auxiliary fields R and iS :

$$\mathcal{L}_2 = \int d^4\theta \left[\frac{1}{2}R^2 + R(C + \overline{C}) + iS(C - \overline{C}) - R(Y + \overline{Y}) - iS(\Upsilon - \overline{\Upsilon}) \right]$$

3. Integrating out R and Υ , we obtain the “dual” system :

$$\mathcal{L}_3 = \int d^4\theta \left[-\frac{1}{2} \left((Y + \overline{Y}) + (C + \overline{C}) \right)^2 + (\Psi - \overline{\Psi})(C - \overline{C}) \right]$$

Instead, integrate out Y and $\Upsilon \rightarrow \mathcal{L}_1$ appears

► Dualize **charged** chiral in D-term and **F**-term

$$\mathcal{L}_4 = \int d^4\theta |\Psi|^2 e^{2V} + \left\{ \int d^2\theta \Psi \mathcal{W}(\Phi) + (\text{h.c.}) \right\}$$

1. Convert **F**-term to D-term via $\mathcal{W} = \overline{D}_+ \overline{D}_- C$:

$$\int d^2\theta \Psi \mathcal{W} + (\text{h.c.}) = 2 \int d^4\theta [\Psi C + \overline{\Psi} \overline{C}]$$

2. Replace $\Psi \pm \overline{\Psi}$ to auxiliary fields R and iS :

$$\mathcal{L}_5 = \int d^4\theta \left[e^{2V+R} + 2 \left\{ e^{\frac{1}{2}(R+iS)} C + e^{\frac{1}{2}(R-iS)} \overline{C} \right\} - R(Y + \overline{Y}) - iS(\Upsilon - \overline{\Upsilon}) \right]$$

3. Integrating out R and Υ , we obtain the “dual” system :

$$\begin{aligned} \mathcal{L}_6 &= \int d^4\theta \left[-2(Y + \overline{Y}) \log \mathcal{F} + \frac{1}{2} \mathcal{F} \mathcal{T} + 2V(Y + \overline{Y}) \right] \\ \mathcal{F} &= -\mathcal{T} + \sqrt{\mathcal{T}^2 + 4(Y + \overline{Y})}, \quad \mathcal{T} = e^{-V} \left[e^{+\frac{1}{2}(\Omega-\overline{\Omega})} C + e^{-\frac{1}{2}(\Omega-\overline{\Omega})} \overline{C} \right], \quad \Psi = e^\Omega \end{aligned}$$

$\Psi - \bar{\Psi}$ still remains **after** the transformation.

The existence is rather important to complete the Duality transformations.

$\Psi - \bar{\Psi}$ appears as an auxiliary field, which **must be removed** finally.

Indeed, the procedure “**integrating-out of $\Psi - \bar{\Psi}$** ” leads to
the correct involution of the dual fields in the system !

$e^{\Omega - \bar{\Omega}}$ still remains **after** the transformation.

The existence is rather important to complete the Duality transformations.

$e^{\Omega - \bar{\Omega}}$ appears as an auxiliary field, which **must be removed** finally.

Indeed, the procedure “**integrating-out of $e^{\Omega - \bar{\Omega}}$** ” leads to
the correct involution of the dual fields in the system !

From GLSM to NLSM

LESSON 1 : GLSM for NS5-brane

D. Tong hep-th/0204186

J.A. Harvey and S. Jensen hep-th/0507204

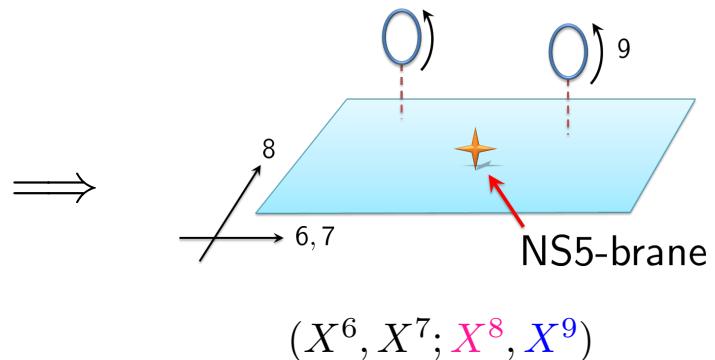

K. Okuyama hep-th/0508097

Bosonic Lagrangian after integrating-out auxiliary fields :

$$\begin{aligned}\mathcal{L}_{\text{NS5}}^{\text{kin}} &= \frac{1}{e^2} \left[\frac{1}{2} (F_{01})^2 - |\partial_m \sigma|^2 - |\partial_m \phi|^2 \right] - \left[|D_m q|^2 + |D_m \tilde{q}|^2 \right] \\ &\quad - \frac{1}{2g^2} \left[(\partial_m X^6)^2 + (\partial_m X^7)^2 + (\partial_m X^8)^2 + (\partial_m X^9)^2 \right] + (X^9 - t^9) F_{01} \\ \mathcal{L}_{\text{NS5}}^{\text{pot}} &= -2(|\sigma|^2 + |\phi|^2)(|q|^2 + |\tilde{q}|^2 + g^2) \\ &\quad - \frac{e^2}{2} \left(|q|^2 - |\tilde{q}|^2 - (X^7 - t^7) \right)^2 - e^2 \left| q\tilde{q} + (X^6 - s^6) + i(X^8 - s^8) \right|^2\end{aligned}$$

Steps to NLSM for NS5-brane

1. SUSY vacua $\mathcal{L}^{\text{pot}} = 0$
2. solve constraints on (q, \tilde{q})
3. IR limit $e \rightarrow \infty$, and integrate out A_m

1. SUSY vacua

$$\sigma = 0 = \phi , \quad |q|^2 - |\tilde{q}|^2 = X^7 - t^7 , \quad -q\tilde{q} = (X^6 - s^6) + i(X^8 - s^8)$$

2. solve constraints on (q, \tilde{q})

$$q = i e^{+i\alpha} \sqrt{|\vec{X}| + (X^7 - t^7)} , \quad \tilde{q} = i e^{-i\alpha_a} \frac{(X^6 - s^6) + i(X^8 - s^8)}{\sqrt{|\vec{X}| + (X^7 - t^7)}}$$

$$|D_m q|^2 + |D_m \tilde{q}|^2 = \frac{1}{2|\vec{X}|} \left[(\partial_m X^6)^2 + (\partial_m X^7)^2 + (\partial_m X^8)^2 \right] + |\vec{X}| \left(\partial_m \alpha - A_m + \Omega_i \partial_m X^i \right)^2$$

$$|\vec{X}| = \sqrt{(X^6 - s^6)^2 + (X^7 - t^7)^2 + (X^8 - s^8)^2}$$

$$\Omega_i \partial_m X^i = \frac{-(X^6 - s^6) \partial_m X^8 + (X^8 - s^8) \partial_m X^6}{|\vec{X}|(|\vec{X}| + (X^7 - t^7))}$$

3. IR limit $e \rightarrow \infty$, and integrate out A_m

$$A_m = \Omega_i \partial_m X^i + \frac{1}{|\vec{X}|} \varepsilon_{mn} \partial^n X^9$$

$$\implies \mathcal{L}_{\text{NS5}}^{\text{NLSM}} = -\frac{1}{2} \left(\frac{1}{g^2} + \frac{1}{|\vec{X}|} \right) \left[(\partial_m \vec{X})^2 + (\partial_m X^9)^2 \right] + \varepsilon^{mn} \Omega_i \partial_m X^i \partial_n X^9$$

LESSON 2 : GLSM for KK-monopole

D. Tong hep-th/0204186

J.A. Harvey and S. Jensen hep-th/0507204

K. Okuyama hep-th/0508097

$\Theta \rightarrow \Gamma :$

$$\begin{aligned}\mathcal{L}_{\text{NS5}} \ni \mathcal{L}_\Theta &= \int d^4\theta \left(-\frac{1}{g^2} \overline{\Theta} \Theta \right) + \left\{ \int d^2\tilde{\theta} (-\Theta) \Sigma + (\text{h.c.}) \right\} \\ &= \int d^4\theta \left\{ -\frac{1}{2g^2} (\Theta + \overline{\Theta})^2 - (\Theta + \overline{\Theta}) V \right\} + \varepsilon^{mn} \partial_m (X^9 A_n)\end{aligned}$$

↓

$$\mathcal{L}_{B\Gamma} = \int d^4\theta \left\{ -\frac{1}{2g^2} \mathcal{B}^2 - \mathcal{B}V - \mathcal{B}(\Gamma + \overline{\Gamma}) \right\} + \varepsilon^{mn} \partial_m (X^9 A_n)$$

real $\overline{B} = B$; chiral $\overline{D}_\pm \Gamma = 0$

$\Theta \rightarrow \Gamma :$

$$\mathcal{L}_{B\Gamma} = \int d^4\theta \left\{ -\frac{1}{2g^2}B^2 - BV - (\Gamma + \bar{\Gamma})B \right\} + \varepsilon^{mn} \partial_m (X^9 A_n)$$

Integrating out $\Gamma, \bar{\Gamma}$: \rightarrow GLSM for NS5-brane

$$B = \Theta + \bar{\Theta}$$

or, Integrating out B : \rightarrow GLSM for KK-monopole

$$\frac{1}{g^2}B = -(\Gamma + \bar{\Gamma}) - V$$

duality relation :

$$\Theta = X^7 + iX^9 + \dots, \quad \Gamma = \tilde{X}^7 + i\tilde{X}^9 + \dots$$

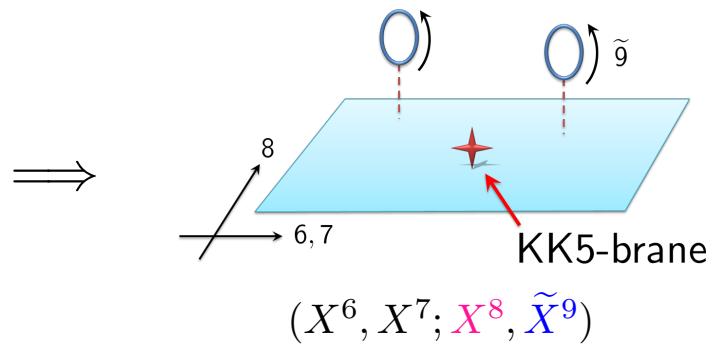

$$\Theta + \bar{\Theta} = -g^2(\Gamma + \bar{\Gamma}) - g^2V \rightarrow$$

$X^7 = -g^2 \tilde{X}^7$ $\pm(\partial_0 \pm \partial_1)X^9 = -g^2(D_0 \pm D_1)\tilde{X}^9$ $D_m \tilde{X}^9 = \partial_m \tilde{X}^9 - A_m$
--

$$\begin{aligned}
\mathcal{L}_{KKM} = & \int d^4\theta \left\{ \frac{1}{e^2} \left(-\bar{\Sigma}\Sigma + \bar{\Phi}\Phi \right) + \bar{Q} e^{+2V} Q + \bar{\tilde{Q}} e^{-2V} \tilde{Q} \right\} + \int d^4\theta \left\{ \frac{g^2}{2} \left(\Gamma + \bar{\Gamma} + V \right)^2 + \frac{1}{g^2} \bar{\Psi}\Psi \right\} \\
& + \int d^2\theta \left(-\tilde{Q}\Phi Q + (s - \Psi)\Phi \right) + (\text{h.c.}) \\
& + \left\{ \int d^2\tilde{\theta} t\Sigma + (\text{h.c.}) \right\} + \varepsilon^{mn} \partial_m (\textcolor{blue}{X}^9 A_n)
\end{aligned}$$

Steps to NLSM for KK-monopole

1. SUSY vacua $\mathcal{L}^{\text{pot}} = 0$
2. solve constraints on (q, \tilde{q})
3. IR limit $e \rightarrow \infty$, and integrate out A_m

1. SUSY vacua

$$\sigma = 0 = \phi , \quad |q|^2 - |\tilde{q}|^2 = X^7 - t^7 , \quad -q\tilde{q} = (X^6 - s^6) + i(X^8 - s^8)$$

2. solve constraints on (q, \tilde{q})

$$q = i e^{+i\alpha} \sqrt{|\vec{X}| + (X^7 - t^7)} , \quad \tilde{q} = i e^{-i\alpha} \frac{(X^6 - s^6) + i(X^8 - s^8)}{\sqrt{|\vec{X}| + (X^7 - t^7)}}$$

$$|D_m q|^2 + |D_m \tilde{q}|^2 = \frac{1}{2|\vec{X}|} \left[(\partial_m X^6)^2 + (\partial_m X^7)^2 + (\partial_m X^8)^2 \right] + |\vec{X}| \left(\partial_m \alpha - A_m + \Omega_i \partial_m X^i \right)^2$$

3. IR limit $e \rightarrow \infty$, and integrate out A_m

$$A_m = \frac{1}{|\vec{X}|H} \left(\partial_m \tilde{X}^9 - \Omega_i \partial_m X^i \right) + \Omega_i \partial_m X^i , \quad H = \frac{1}{g^2} + \frac{1}{|\vec{X}|}$$

$$\mathcal{L}_{KKM}^{\text{NLSM}} = -\frac{H}{2} (\partial_m \vec{X})^2 - \frac{1}{2H} (\partial_m \tilde{X}^9 - \Omega_i \partial_m X^i)^2 + \varepsilon^{mn} \partial_m ((X^9 - t^9) A_n)$$

GLSM for 5_2^2 -brane

S. Sasaki and TK arXiv:1305.4439

Worldvolume action of exotic 5_2^2 -brane

S. Sasaki, M. Yata and TK arXiv:1404.5442

Worldvolume action of 5_2^2 -brane could be obtained from

- D5-brane's action via S- and T-dualities
- KK6-brane action via reduction and T-duality
- M5-brane action via reduction and T-dualities

Different point: **Two** isometries along transverse directions

How to describe its worldvolume theory with isometries?

Worldvolume action of 5_2^2 -brane could be obtained from

- D5-brane's action via S- and T-dualities
- KK6-brane action via reduction and T-duality
- M5-brane action via reduction and T-dualities

Different point: **Two** isometries along transverse directions

How to describe its worldvolume theory with isometries?

Already Known!

Bergshoeff et al hep-th/9706117

Worldvolume action with WZ-term is **gauged** with respect to isometries

ex.) gravity sector of KK6-brane action with gauged isometry in M-theory

$$\begin{aligned}
 \mathcal{L}_{\text{KK6}}^{\text{M}} &= -\frac{1}{2} T_{\text{KK6}}^{\text{M}} \sqrt{-\gamma} \left(k^{\frac{4}{7}} \gamma^{ab} D_a X^\mu D_b X^\nu g_{\mu\nu} - 5 \right) \\
 &= -T_{\text{KK6}}^{\text{M}} k^2 \sqrt{-\det(D_a X^\mu D_b X^\nu g_{\mu\nu})} \\
 &= -T_{\text{KK6}}^{\text{M}} k^2 \sqrt{-\det(\partial_a X^\mu \partial_b X^\nu \Pi_{\mu\nu})}
 \end{aligned}$$

$$D_a X^\mu = \partial_a X^\mu + C_a k^\mu \quad k^\mu : \text{Killing vector}$$

$$\Pi_{\mu\nu} = g_{\mu\nu} - \frac{k^\mu k^\nu}{k^2}$$

✓ Construct the worldvolume action with WZ-term in a covariant way:

$$\text{KK6} \xrightarrow{\text{reduction}} \text{KK5 in IIA} \xrightarrow{\text{T-duality}} 5_2^2 \text{ in IIB}$$

$$\text{M5} \xrightarrow{\text{reduction}} \text{NS5 in IIA} \xrightarrow{\text{T-dualities}} 5_2^2 \text{ in IIA}$$

✓ 5_2^2 -branes in heterotic theories can be obtained by truncation:

$$5_2^2 \text{ in IIB} \xrightarrow[\mathcal{N}=(1,1) \rightarrow \mathcal{N}=(1,0)]{\text{RR} = 0} 5_2^2 \text{ in HSO}$$

$$5_2^2 \text{ in IIA} \xrightarrow[\mathcal{N}=(2,0) \rightarrow \mathcal{N}=(1,0)]{\text{RR} = 0} 5_2^2 \text{ in HE8}$$

$$\begin{aligned}
S_{5_2^2}^{\text{IIB}} = & -T_{5_2^2} \int d^6\xi e^{-2\phi} (\det h_{IJ}) \sqrt{1 + e^{+2\phi} (\det h_{IJ})^{-1} (i_{k_1} i_{k_2} (C^{(2)} + C^{(0)} B))^2} \\
& \times \sqrt{-\det \left[\Pi_{\mu\nu}(k_2) \partial_a X^\mu \partial_b X^\nu + \frac{K_a^{(1)} K_b^{(1)}}{(k_2)^2} - \frac{(k_2)^2 (K_a^{(2)} K_b^{(2)} - K_a^{(3)} K_b^{(3)})}{(\det h_{IJ})} + \lambda \mathcal{F}_{ab} \right]} \\
& - \mu_5 \int_{\mathcal{M}_6} \left[P[i_{k_1} i_{k_2} B^{(8,2)}] - \frac{1}{2} P[\tilde{B} \wedge \tilde{C}^{(2)} \wedge \tilde{C}^{(2)}] + \lambda P[\tilde{C}^{(4)} + \tilde{C}^{(2)} \wedge \tilde{B}] \wedge \tilde{F} \right. \\
& \left. - \frac{\lambda^2}{2!} P[\tilde{B}] \wedge \tilde{F} \wedge \tilde{F} + \frac{\lambda^3}{3!} \frac{i_{k_1} i_{k_2} (C^{(2)} + C^{(0)} B)}{(i_{k_1} i_{k_2} (C^{(2)} + C^{(0)} B))^2 + e^{-2\phi} (\det h_{IJ})} \tilde{F} \wedge \tilde{F} \wedge \tilde{F} \right]
\end{aligned}$$

$$h_{IJ} = k_I^\mu k_J^\nu (g_{\mu\nu} + B_{\mu\nu}), \quad \text{etc..}$$
